# Swarom Firagannavar

Pune, Maharashtra | swarom66@gmail.com | +91 7507919125 | GitHub | Portfolio

## PROFESSIONAL SUMMARY

Final-year CSE student who builds and ships things — from a deployed multimodal AI plant pathologist to a copyright-registered academic platform. Proficient in Python, FastAPI, and Firebase; comfortable across the ML and web stack. Seeking software engineering or ML internship and placement opportunities.

## SKILLS

**Languages:** Python, Java, JavaScript
**Web Technologies:** HTML, CSS, FastAPI, REST APIs
**AI / ML:** Gemini Vision API, TensorFlow/Keras, CNN, LLM Integration, Stable Diffusion, Prompt Engineering, HuggingFace Inference API
**Databases:** MySQL, MongoDB, Firebase Firestore
**Tools & Platforms:** Git, GitHub, Postman, Docker
**Core CS:** Data Structures, OOP, DBMS, System Design basics

## PROJECTS

**FOLIAGE CARE: AI PLANT PATHOLOGIST** **[Link/ GitHub]**

*Python · FastAPI · Docker · Cloud Run · Gemini / Groq / GPT-4o-mini · FLUX.1 · Firebase · Leaflet.js · JavaScript*

- Architected and deployed a multimodal plant-disease API on Google Cloud Run via Docker, engineering a 3-tier LLM fallback chain (Gemini 2.5 Flash → Groq/Llama 4 → GPT-4o-mini) with circuit-breaker logic for geo-restriction and automatic failure recovery.
- Engineered a two-stage disease progression simulator: Gemini generates a season- and GPS-aware visual prompt, fed into a 3-tier HuggingFace fallback (SD 1.5 img2img → FLUX.1-schnell → SD 1.5 txt2img) producing 7-day untreated pathology forecast images.
- Designed a role-adaptive consultation engine with 4 user personas (farmer, nursery, home gardener, student), injecting real-time GPS, live weather, and Indian seasonal context into a localized, 4-tier remedy priority ladder across all API modules.
- Built a real-time community outbreak map (Leaflet.js + Firestore onSnapshot) with animated severity markers, alongside a "My Garden" dashboard featuring severity-scored SVG health sparklines to track plant condition over time.

**TERM-TRACK: ACADEMIC ELIGIBILITY & COURSE MANAGEMENT SYSTEM**

*Java · MySQL · HTML · CSS · JavaScript*

- Built a full-stack academic platform with a dynamic course catalogue supporting real-time search and multi-axis filtering (category, difficulty, duration, credit hours) with a personalized bookmarking system for students to track relevant courses
- Engineered an automated eligibility engine evaluating student academic records against configurable prerequisites — auto-generating Term Grant Slips for qualifying students and instantly updating approval status in the database, eliminating manual verification overhead
- Implemented 3-role RBAC (student, faculty, admin) with secure session management; registered copyright **(L-150404/2024)** for the core eligibility algorithm

**RECONCILE.LY** **[Link/ GitHub]**

*HTML · CSS · JavaScript · SheetJS · Netlify |*

- Built a browser-based COD remittance reconciliation tool — parses CSV/XLSX files via SheetJS, matches AWB numbers across courier formats with 2% short-pay tolerance, and classifies orders into Matched, Short-paid, and Missing statuses entirely client-side
- Engineered cross-currency mismatch auto-detection with configurable FX conversion, a live "Recovery Potential" metric, and a one-click Claims Generator that produces pre-filled courier dispute emails — reducing manual claim work from 2 hours to 60 seconds

## EDUCATION

**MIT ADT University, Pune** B.Tech CSE (Pursuing) — 7.76 CGPA | Expected 2026

**The Lexicon International School, Pune** 12th — First Class | 2022

**The Lexicon International School, Pune** 10th — First Class with Distinction | 2020

## CERTIFICATIONS

- AWS Academy Graduate — Cloud Foundations
- HTML, CSS & JavaScript for Web Developers (Coursera / Johns Hopkins University)
- Cisco — Networking Basics
- Relational Database Design (Coursera)
